

Preventive Drug List

What is a Preventive Drug List?

It's a list of drugs that may help prevent serious illnesses and complications. IRS guidelines for high-deductible health plans provide that preventive care, including prescription medications used for preventive purposes, can be excluded from the deductible. Taking preventive drugs, as directed by your doctor, may help you live a healthier life today and avoid serious illness in the future.

If you have a high-deductible health plan and your pharmacy benefit covers drugs on the Preventive Drug List, your plan will cover the drugs on this list before you meet your deductible. They will be covered at 100%.

What Happens at the Pharmacy?

If your medication is on the Preventive Drug List, the pharmacy computer claims system will tell the pharmacist that there is no cost to you.

Which Medications are Included?

See the generic, preferred brand and non-preferred brand medications below. For the lowest out-of-pocket expense, you should always consider generics if you and your doctor decide they are right for you. **Generic drugs are listed in lower-case letters followed by (g).** Consider brand-name drugs if no generic drugs are available to treat your condition. **Brand-name medications are listed in ALL CAPITAL letters. Non-preferred brand-name medications are followed by an (NP).**
